DESCRIPTION

These high temperature probe-type thermostats are designed specifically for applications where high temperature exposure, hermeticity and vibration resistance are required. A snap-acting, bimetal disc, mounted in the tip of the probe, provides fast thermal response and rapid, positive contact action when the preset temperature is reached.

The probes are of all welded, stainless steel construction with glass to metal seals to ensure hermeticity. Switch design and construction provide high vibration and shock resistance sufficient to meet MIL-STD-202, Method 204, Condition D. High contact force and the excellent wiping action of the contacts combine to make the probe suitable for light loads of 100 milliamperes or less.

TEST SAMPLES

Operating samples generally can be supplied for application tests. A completed Fenwal Snap-Disc Application Data form, available from Fenwal or your local Fenwal sales representative, is required to select and produce an operating sample.

Thermocouple samples often prove more helpful and accurate in determining actual set point temperatures for operating thermostats. Be sure to specify iron-constantan or copper-constantan thermocouple, whichever is compatible with your equipment.

HOW TO ORDER

Based on the listed specifications, an eleven (11) digit catalog number will be assigned by the factory. All future communications with Fenwal should reference this number.

To order:

1. Specify Series 08-80.
2. Specify opening and closing temperatures in degrees Fahrenheit or Celsius with tolerance, and whether the switch should open or close on temperature rise.
3. Specify mounting configuration, terminations, lead wire type (if applicable), and tube length by selecting one code number from each category in Table 1.

EXAMPLE: Series 08-80 open at 390°F ± 18°F, close at 355°F ± 15°F; B8, T17, L1, P2.
